

AGSWORLD

# Assessment Installation

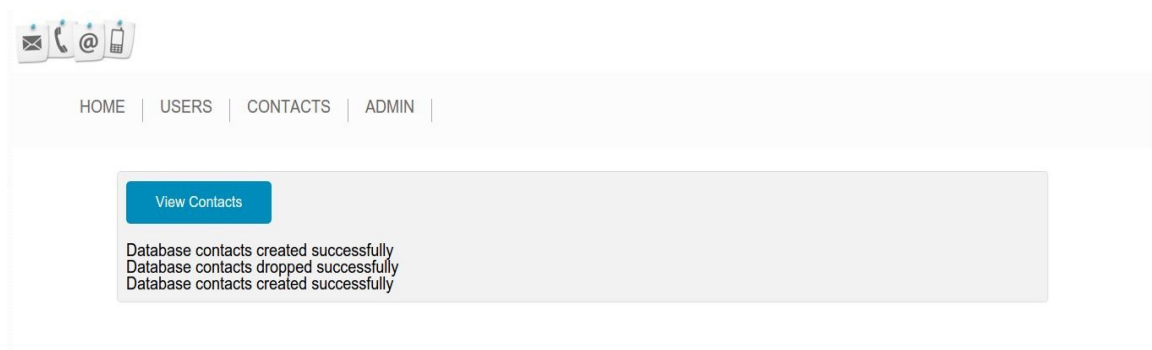

v1.00

How to install the application.

1. Copy all contents of **agsworld.zip** into your server directory and unzip the file.
2. Copy file **`application/Config/database.conf.sample.php`** and rename to **`application/Config/database.conf.php`** into same directory then edit the file to match your database settings.

```
public $default = array(  
    'datasource' => 'Database/Mysql',  
    'persistent' => false,  
    'host' => 'localhost',           // HOST MACHINE  
    'user' => 'root',               // HOST USERNAME  
    'password' => 'password',       // HOST PASSWORD  
    'database' => 'contacts',       // HOST DATABASE (*Optional to change)  
);
```

3. Navigate to **agsworld** and application should take you to the admin page and install the database and initialize tables.

4. Once all is done you can navigate through the application to **add users, add contacts and add contact types** (basics types are inserted on schema creation).
  1. Add Users
    1. Add users for contacts in 2.
  2. Add Contacts
    1. Add contacts for users in 1
  3. Add Contact Types
    1. Add contact types for contacts in 2
